RESEARCH EXPERIENCE

Graduate Researcher **Fall 2018 - Present**

The Earley Lab, University of Alabama

- Quantifies the impact of abiotic variables on levels of gene flow and genetic divergence between populations of *Kryptolebias marmoratus*
- Investigates eDNA concentration's relation to density over time as a proxy for traditional measures of species abundance.
- Evaluates the abiotic and biotic factors which impact occupancy and abundance in *Kryptolebias marmoratus* through ecological niche modeling and Bayesian hierarchical models.
- Identifies the genomic and epigenomic variants driving sexual plasticity while quantifying associated gene expression patterns.

Undergraduate Researcher **Fall 2016 - Summer 2018**

Freshwater Ecology Lab, University of South Florida

- Surveyed and identified littoral benthic invertebrates throughout the Tampa Bay area to assess urban pond health.
- Sampled, identified, and measured over 5,000 fish to assess the difference between urban pond types for direct application within urban planning.
- Assessed differences between pond types for both benthic invertebrate and littoral fish community composition and biodiversity.
- Completed geospatial analysis to derive pond characteristics from satellite imagery.

Undergraduate Researcher **Fall 2012 - Spring 2013**

Saint Leo University, Saint Leo, FL

- Quantified mangrove forest health throughout Tampa Bay using quartile plots.
- Measured the abundance and distribution of galls located on red mangroves throughout Tampa Bay.
- Investigated the relationship between salinity and gall formation on red mangroves.
- Aided in artificial oyster reef experiments to quantify the abiotic factors affecting reef success.

Research Volunteer

Fall 2012 - Spring 2013

Mangrove Watch, Tampa, FL

- Conducted mangrove forest surveys throughout Tampa Bay.
- Employed video surveillance of shoreline habitat throughout Tampa Bay to assess mangrove health.
- Quantified mangrove forest health through individual tree tagging and measurements.
- Lead groups of volunteers in collected key data to serve as mangrove forest health baselines used in long-term monitoring programs.
